Product Registration - Guidance for Technical Assessors

BULLETIN 002 (16/03/22)

TOPAS 2130

This specification will be amended when new specifications are created. You are advised to note the version you are using and ensure it is the latest version which can be found on the TOPAS website. (see below)

TOPAS 2541 - VAS

Regulation 58 TSRGD 2002 which permitted the use of conspicuity lights was removed in 2016 following the Traffic Signs Review. It was determined that the vehicle activation of the light would be sufficient.

Please advise manufacturers that TRSGD does not permit the use of conspicuity of VAS. This does not affect any products already registered.

TOPAS 2502/03/37/38 (TOPAS 2540)

The specification TOPAS 2540 was to be an amalgamation of the above four specifications. Following the first round of consultation it was clear that this could not be the case. TOPAS 2540 will be a fresh specification covering the products identified within the old specifications. It is likely that a manufacturer who registers to the old specification **may** not meet the requirements of the new specification.

Where manufacturers wish to register to the old specifications then please advise of the position. The new TOPAS 2540 specification will not be expected for some time.

TOPAS 2510 (rising bollards)

This specification is now under internal review 17/3/22

Specification Reviews

Current review states:

TOPAS 2517: first consultation ended. TOPAS will now review comments received

TOPAS 2130: first consultation ended. TOPAS will now review comments received

New specifications ongoing:

Traffic Signal Heads– TOPAS 2543
